

## NOTICE... NOTICE... NOTICE... NOTICE

Your MGG mower is equipped with FOUR electronically controlled SAFETY INTERLOCK SWITCHES.

These devices prevent unsafe operation of your mower and may at times either prevent the engine being started or may cause an “unexpected” engine shutdown when a potentially unsafe situation occurs.

The safety interlocks are:

Drivers Seat	Detects Driver On/Off Machine
Grass Catcher	Detects Catcher Open/Closed
Parking Brake	Detects Brake On/Off
Cutting Blade Lever	Detects Mowing Blades In/Out Of Gear

Examples:

Problem	Possible Cause
Machine Will Not Start	No one sitting on drivers seat Mowing blades engaged Brake off
Engine Stops Unexpectedly	Driver leaves seat without engaging Parking Brake Driver leaves seat while grass cutting blades are still engaged Cutting blades still engaged when opening grass catcher

Note that the inability to start the engine or its stopping unexpectedly may be from a **combination** of different machine settings or operator actions. Should you experience problems with the starting or stopping of the engine carefully check all options before calling for assistance.
